Safersonic

Sterile Transducer-Cover with Adhesive

- *No Rubber Bands*
- *No Artifacts*
- *No Gel at the Transducer*
- *Latexfree*
- *No Glue Remnants*

NEW: Now Intended for Intrasurgical Use!

Sterile Gel-Free-Transducer Cover with Adhesive

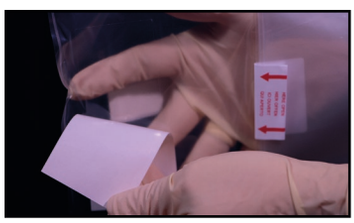
Adhesive eliminates the need of Gel under the Cover – no more bubbles or wrinkles.

Telescopic folding provides sterile application.

Single use Safersonic Transducer-Cover, packed in sterile pouch is now intended for intrasurgical use!

Three steps to successful use

Reach into the cover following the path of the white tab and remove the white rectangle to expose the adhesive area.



Press adhesive against the center of the Transducer using the middle-finger - to prevent wrinkles, rub/flatten adhesive area towards both ends.

The non sterile person grabs the cover and pulls it over head and cable – remove white tab and wrap around probe cover.
